NIKI RUSH MINING GROUP LIMITED

### RAB & AUGER DRILLING

NMGL has invested in its own drilling capability in order to achieve fast, efficient, low cost first-pass exploration data. The drilling team is capable of deploying rapidly to site where they are accommodated in their own mobile field camps and capable of gathering field data from below regolith, the resulting samples are transported swiftly to accredited laboratories in Africa, where our strategic relationships ensure optimal service. The drill rig which is mounted on an all-terrain vehicle is capable of both RAB and Auger drilling and can drill down to depths greater than 100 meters in favorable ground conditions. Its rugged design and 4x4 functionality makes it highly mobile and will enable it to access rough terrain and road conditions conventional truck mounted drill rigs cannot operate in. This should enable the Company to operate during periods of seasonal rain thereby extending the length of the effective annual drilling season.

### LOGISTICS SUPPORT

NMGL's field teams are highly mobile and capable of rapid deployment thanks to a well-developed logistics support structure based out of our operations office. Within easy reach of the highly prospective gold belts, NMGL is able to support exploration projects in **Democratic Republic of Congo, Angola, Namibia, Kenya, Uganda, Tanzania, Burundi and Zambia**. International Trading Division is a full-service international commodities exporter and importer. We provide clients with consistent and reliable logistics service distribution at the best value.
